

London, September 17, 2025. Brian Gallagher, Head of Investor Relations at Capital Clean Energy Carriers Corp. (NASDAQ: CCEC), was among the speakers at the Capital Link Maritime conference in London. A positive outlook on LNG market development and expansion opportunities for LNG Shipping were outlined during a panel discussion with other Gas Shipping executives.

Gallagher illustrated the positioning of the company with 12 LNG carriers on the water and 6 new carriers under construction. He also took the opportunity to remind the audience of the company's credentials in capital markets built up via a listing on Nasdaq since March 2007.

The key focus on the LNG portion of the panel discussion centered around the potential for new LNG shipping capacity. He said 300m to 350m tonnes of new LNG production is due to come on stream by 2030 if all projects are approved particularly in the US. Using the multiplier of 1.5 LNG carriers required per 1 mtpa of production, he calculated that the industry will need just over 500 ships should this production come on stream compared with a current orderbook of 292 vessels and a shrinking older portion of the current fleet on the water made up of older technology steam vessels.
